

Brainstorming & Idea Prioritization Template

Date	30 June 2026
Team ID	SWTID-2026-1614
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	V.HarishKumar	Build a machine learning pipeline using Linear Regression to predict a country's Human Development Index (HDI) based on life expectancy, schooling, and gross national income (GNI) per capita.	Core Feature	1
2	V.HarishKumar	Create a Flask web application with a glassmorphism UI that allows users to easily input life expectancy, schooling, and GNI to get immediate HDI predictions.	Core Feature	1
3	V.HarishKumar	Integrate a country search dropdown pre-populated with historical indicators from 195 countries to auto-fill the input fields for the user	UI/UX	1
4	V.HarishKumar	Develop a dashboard visualization feature to show country-wise historical trends and comparative rankings of HDI metrics.	Analytics & Reporting	1
5	V.HarishKumar	Deploy the Flask web application using a containerized environment (Docker) to a cloud hosting platform for global access.	Deployment	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	An ML-based HDI predictor engine (Linear Regression) served via a Flask web application with a glassmorphism form interface.	High	High	1	Yes
2	Interactive country search dropdown that auto-populates historical metrics (Life Expectancy, Schooling, GNI) to improve user experience	High	High	2	Yes
3	Dashboard containing interactive charts to visualize HDI trends and rank countries.	Medium	Medium	3	No (Post-MVP)
4	Cloud deployment of the Flask web application to make the predictor accessible online.	High	High	2	Yes
