

Empathy Map

Date	30 June 2026
Team ID	SWTID-2026-1614
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	4 Marks

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I want to estimate how targeted investments in schooling or healthcare will change our nation's HDI ranking next year.” • “Navigating raw global datasets and manually computing index shifts takes too much time.” • “I need clear, interactive numbers to support my development policy recommendations.”	THINKS • Will a simple Linear Regression model provide a reliable enough projection to present to stakeholders? • I hope this web app saves me from having to write custom analysis scripts every time I change a parameter. • Can I easily look up our historical country data to use as a starting baseline?
PERSONA NAME <i>Rakesh – Small/Marginal Farmer (Primary End User)</i>	
DOES • Collects socio-economic metrics (Life Expectancy, Schooling, GNI) from various research papers. • Enters estimated future values into the HDI Predictor form to test different scenarios. • Compares the predicted outcome scores to evaluate policy feasibility.	FEELS • Overwhelmed: By outdated annual development statistics and static spreadsheets. • Encouraged: When given a clear, immediate indicator of a country's development tier (e.g., transitioning from Medium to High). • Confident: Using a clean, data-backed interface to justify funding allocation suggestions.
