

Problem-Solution Fit

Date	1 July 2026
Team ID	SWTID-2026-1614
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Policy researchers, economists, and graduate students studying human development trends. Secondary segment: government policymakers and NGOs assessing development interventions.	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] Limited statistical or programming background among some policy staff; no easy way to run custom scenarios without coding. Little to no budget for premium analytics software or licenses; time constraints for manual spreadsheet computation.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] UNDP official HDI reports: authoritative but static/annual, cannot be simulated. Excel/manual formula recalculation: flexible but slow and error-prone. Academic papers/tools: rigorous but not interactive or accessible without coding.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] Researchers struggle to quickly estimate or project a country's HDI when planning policy interventions, often relying on manual spreadsheet calculations. Occurs frequently during report cycles, coursework, and grant proposals (several times per month).	9. PROBLEM ROOT / CAUSE [RC] No accessible, interactive tool lets non-programmers input custom values for Life Expectancy, Schooling, and GNI and instantly see the resulting HDI score. Most researchers fall back on static annual reports or manual spreadsheet math instead of a live simulation.	7. BEHAVIOR + ITS INTENSITY [BE] Researchers regularly reference UNDP HDI reports and compare countries (moderate–high intensity, several times per month). They also consult colleagues and academic literature before finalizing projections.

3. TRIGGERS TO ACT [TR] Start of a new research project or policy brief. A change in national statistics prompting reanalysis, or an upcoming presentation/publication deadline.	10. YOUR SOLUTION [SL] The HDI Predictor's ML-based regression engine takes core indicators (Life Expectancy, Mean Schooling, GNI per Capita) and instantly outputs a predicted HDI score and developmental tier.	8. CHANNELS OF BEHAVIOR [CH] ONLINE UNDP website, Kaggle datasets, research forums, academic Slack/Twitter communities.
4. EMOTIONS BEFORE / AFTER [EM] Before: frustrated, time-pressured, uncertain about assumptions. After: confident, reassured, and efficient.	This directly addresses the root cause by replacing static annual reports and manual spreadsheet math with a personalized, data-driven simulation — accessible without needing to write code.	OFFLINE University research labs, government policy offices, conferences and workshops.
